

News Release from CyberPath, Inc.

Piscataway, New Jersey, November 22, 2005. CyberPath, Inc. a leading producer of Ethernet switches and other networking equipment announced today its participation in the successful pilot operation of CyberPath's POE4424 layer 2 managed Ethernet switch in concert with an Avaya IP telephone system for the Piscataway, NJ Board of education. CyberPath is currently in negotiations for future deployments of similarly engineered systems. For more information about CyberPath's participation in this project call Art Gartenlaub, VP of Sales and Marketing at 732-463-7700 ext.267.

The Piscataway, NJ Board of Education is using CyberPath's POE4424 switch in concert with Avaya's IP Office. This solution, installed by one of Avaya's premier business partners, Platinum Communications, Somerset, NJ, has saved the School district considerable expense by providing power to the Avaya IP phones from a single point in the BOE phone closet. This configuration eliminates the need to run additional AC power to each of the phones. In addition it provides true reliability by allowing a single UPS to provide back-up power in the event of a power failure.

About CyberPath
