

CyberPath PowerPath POE4408

The Tolly Group awards the "Tolly Power over Ethernet 2006" Tolly Verified #10831 certification to Power Path POE4408 in verification that Power Path POE4408 - acting as a Power Sourcing Equipment (PSE) - complies with all key parameters of the IEEE 802.3af standard as per the criteria outlined on our Web site at: <http://www.tolly.com/TVProgDetail.aspx?ProgID=10831>

In order to assure effective operation in a network, compliance with the IEEE basic specifications for Power over Ethernet is essential. Devices providing power to the powered devices such as Wireless Access Points, IP telephones etc. in compliance with the IEEE 802.3af standard assure interoperability of equipment from multiple vendors and increased flexibility in deployment.

“ Power over Ethernet’s time has certainly come with Enterprises worldwide leveraging it to support key infrastructure elements like VoIP phones, Wireless access points and even IP-base video cameras. Customers can count on ‘Tolly Verified’ vendors to deliver as promised. ”

Kevin Tolly
President/CEO
